

THERE IS NO SUCH THING AS A  
"VERSION OF A CACTUS CODE"

THERE ARE VERSIONS OF THE FLESH,  
AND VERSIONS OF THE THORNS

THEN THERE ARE CONFIGURATIONS OF THESE  
COMPONENTS YOU ASSEMBLE AND RUN

# CACTUS - A MODULAR FRAMEWORK

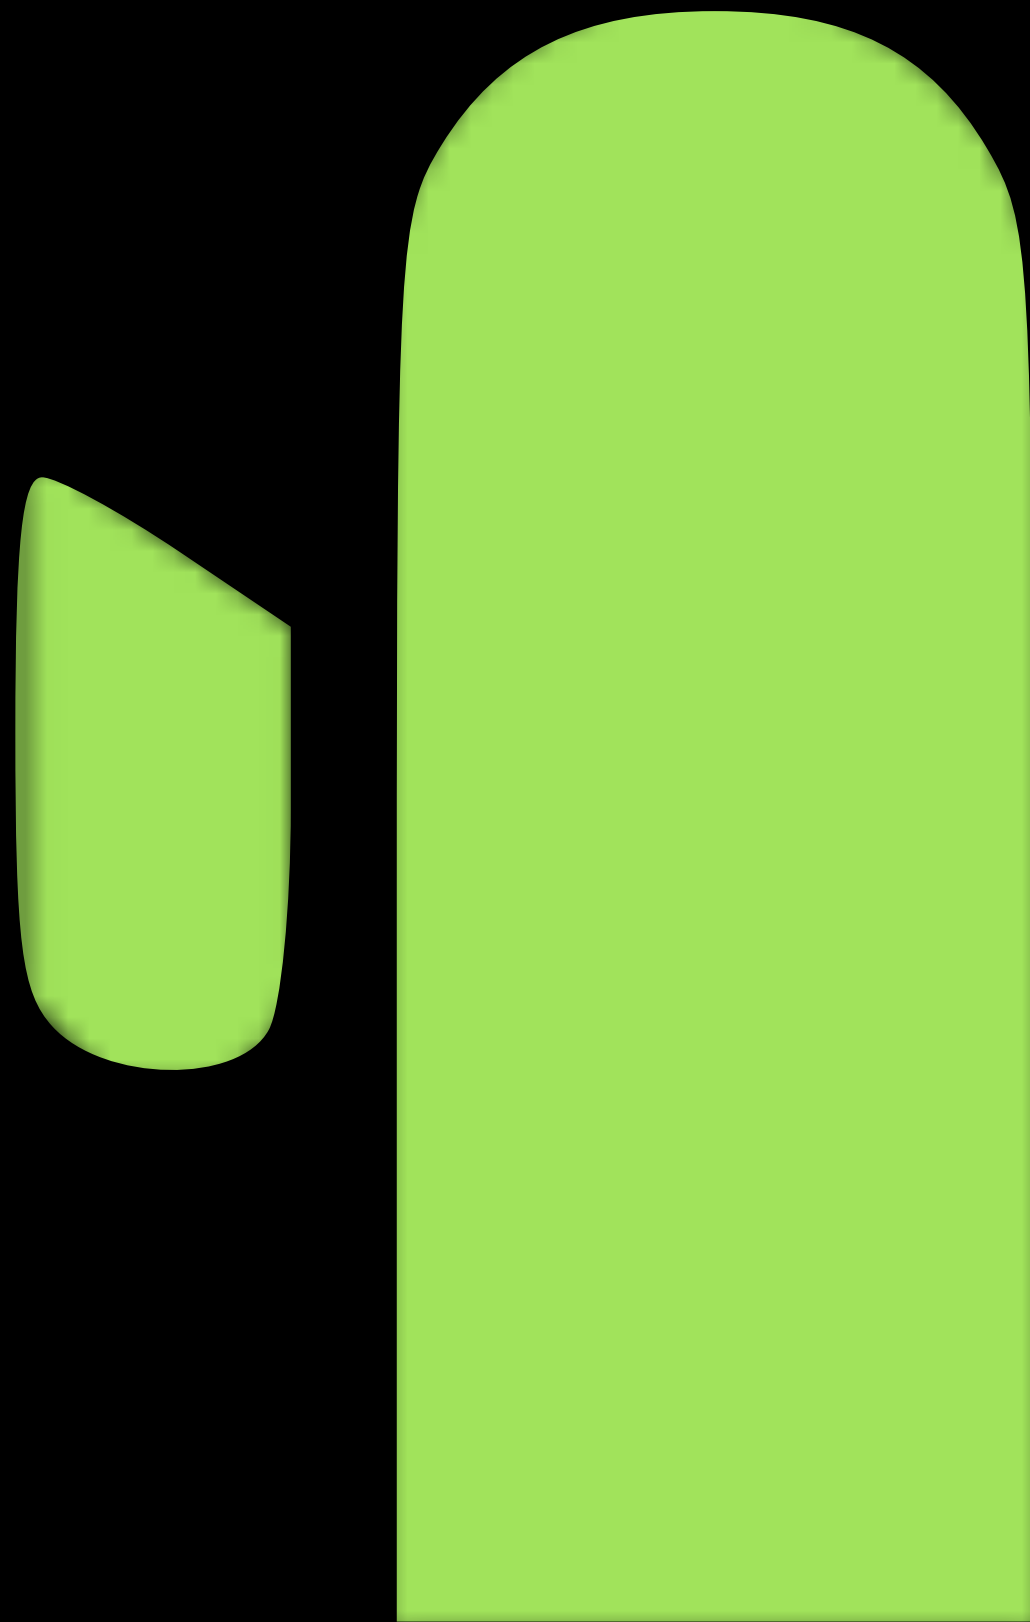

THERE IS NO SUCH THING AS A  
"VERSION OF A CACTUS CODE"

THERE ARE VERSIONS OF THE FLESH,  
AND VERSIONS OF THE THORNS

THEN THERE ARE CONFIGURATIONS OF THESE  
COMPONENTS YOU ASSEMBLE AND RUN

# CACTUS CONFIGURATIONS ARE DEFINED BY "THORNLISTS"

- Each configuration is a list of thorns
- A script called GetComponent takes a thornlist as an argument
- The thornlist is a custom language, that GetComponent reads to find out which versions of which thorns from where on the internet to checkout, and how to arrange them
- The thornlist also controls which thorns are built using the Cactus build system
